**Instructions to Students**

- Answer the following question. Total Marks: 100.
- Analyze each problem carefully before applying the appropriate Brute Force technique.
- Clearly show all intermediate steps, comparisons, iterations, and logical reasoning used in solving the problems.
- Apply suitable algorithms for sorting, searching, Closest-Pair, and Convex-Hull problems wherever required.
- Justify the correctness and efficiency of the proposed solution using appropriate complexity analysis.
- Use diagrams, tables, or stepwise illustrations wherever necessary for better explanation.
- Maintain neat presentation, proper algorithmic notation, and structured analytical reasoning throughout the answers.

| Question Type               | Focus Area                                                                                         | Questions |
|-----------------------------|----------------------------------------------------------------------------------------------------|-----------|
| Application-Based Questions | Apply Brute Force techniques for sorting, searching, Closest-Pair and Convex-Hull problem analysis | Q1        |

**SECTION A – APPLICATION BASED QUESTIONS**

**Code of Conduct**

I (192421006) M. Rakesh (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: M. Rakesh

### RUBRICS FOR CALCULATION

| Criteria                         | Wt. | Level 4 – Exemplary                                                        | Level 3 – Proficient                                  | Level 2 – Developing                           | Level 1 – Beginning                                    |
|----------------------------------|-----|----------------------------------------------------------------------------|-------------------------------------------------------|------------------------------------------------|--------------------------------------------------------|
| Understanding of Problem Context | 20% | Clearly understands the problem and accurately identifies all requirements | Good understanding with minor gaps                    | Basic understanding; some requirements unclear | Poor understanding or misinterpretation of the problem |
| Application of Concepts          | 30% | Accurately applies appropriate concepts to solve complex problems          | Applies relevant concepts correctly with minor errors | Applies basic concepts with limited accuracy   | Fails to apply appropriate concepts                    |
| Problem-Solving Approach         | 20% | Logical, well-structured, and efficient approach                           | Mostly logical approach with minor gaps               | Basic approach with some inconsistencies       | Illogical or unclear approach                          |
| Accuracy of Solution             | 20% | Completely correct solution with proper justification                      | Mostly correct with minor errors                      | Partially correct solution                     | Incorrect or incomplete solution                       |
| Clarity                          | 10% | Clear, well-organized, and properly explained solution                     | Understandable with minor clarity issues              | Limited clarity and explanation                | Poorly presented and difficult to understand           |

### Marks Evaluation:

| Criteria                         | Wt. | Level 4 – Exemplary | Level 3 – Proficient | Level 2 – Developing | Level 1 – Beginning |
|----------------------------------|-----|---------------------|----------------------|----------------------|---------------------|
| Understanding of Problem Context | 20% |                     |                      |                      |                     |
| Application of Concepts          | 30% |                     |                      |                      |                     |
| Problem-Solving Approach         | 20% |                     |                      |                      |                     |
| Accuracy of Solution             | 20% |                     |                      |                      |                     |
| Clarity                          | 10% |                     |                      |                      |                     |
| <b>Total Marks (100):</b>        |     |                     |                      |                      |                     |

## Binary Search.

a, Problem Interpretation

Given Sorted array.

[6, 12, 18, 24, 30, 36, 42, 48].

To find 24 using Binary search

b, Method Selection Justification

Binary search is selected because:

- i, The data is already sorted.
- ii, It eliminates half of remaining elements after each comparison.
- iii, It is much faster than linear search for large Datasets.

c, Steps :-

i, Low = 0    High = 7     $Mid = 0 + 7/2 = 3$

Element at 3 = 24

∴ Target Found.

d. Total Comparisons

Comparison 1:

$$24 == 24$$

Total Comparisons is 1

e. Time Complexity analysis

| Case         | Time Complexity |
|--------------|-----------------|
| Best case    | $O(1)$          |
| Average case | $O(\log n)$     |
| Worst case   | $O(\log n)$     |

In this case

$$\text{Time Complexity} = O(1)$$

f. Verification

The binary search successfully found target element.

- \* Target = 24
- \* Position = 3
- \* Comparison = 1
